Hi All,

Before proceeding further, I'd like to know if a-n-y-o-n-e reads these FEMA/Comet/NOAA posts?

Secondly, has anyone actually investigated, subscribed to or taken any of the free, online classes posted?

Posts are meant to be informative and help weather "novices" like us to learn more and grow into being more aware.

Any feedback would be most encouraging. ;-D

ANOTHER PACIFIC STORM WILL TAKE AIM AT SOUTHERN CALIFORNIA
WEDNESDAY AFTERNOON THROUGH THURSDAY..WITH AMPLE MOISTURE AND

OF THE HEAVIEST PART OF THE STORM THAT WILL MOVE INLAND WEDNESDAY
EVENING OR WEDNESDAY NIGHT. PERIODS OF MODERATE TO HEAVY
PRECIPITATION WILL BE POSSIBLE.

RAINFALL AMOUNTS WILL MOST LIKELY BE HIGHLY VARIABLE...GIVEN THE
SHOWERY NATURE OF THE STORM. HOWEVER...IT APPEARS THAT RAINFALL
AMOUNTS WILL RANGE BETWEEN 0.5 AND 1.25 INCHES WEST OF THE
MOUNTAINS AND BETWEEN 1.5 TO 2.5 INCHES IN THE MOUNTAINS. EVEN THE
DESERTS COULD SEE AROUND A HALF INCH OR MORE OF RAINFALL.

POSSIBLE IMPACTS...

* A PERIOD OF MODERATE TO HEAVY RAINFALL THAT MAY CAUSE LOCAL
FLOODING PROBLEMS IN POORLY DRAINED AREAS...MAINLY WEDNESDAY
EVENING OR WEDNESDAY NIGHT.

* THUNDERSTORMS...WITH PERIODS OF BRIEF HEAVY RAIN RATES...SMALL
HAIL...GUSTY AND ERRATIC WINDS AS WELL AS DANGEROUS CLOUD TO
GROUND LIGHTNING STRIKES.

* WATERSPOUTS OVER THE COASTAL WATERS.

* LIGHT ACCUMULATIONS OF SNOW AT THE HIGHER RESORTS ON THURSDAY.

GIVEN THE WARM NATURE OF THIS STORM...SNOW LEVELS WILL PRIMARILY REMAIN ABOVE 7500 FEET FOR THE BRUNT OF THE SYSTEM...BUT FALL TO AROUND 6500 FEET BY THURSDAY. THEREFORE...ANY HEAVY SNOWFALL WILL MOST LIKELY BE CONFINED TO THE HIGHEST PEAKS OF THE SAN BERNARDINO MOUNTAINS...WITH ONLY LIGHT ACCUMULATIONS OF SNOW POSSIBLE AT RESORT LEVELS DURING THE DAY ON THURSDAY.

THIS STORM WILL MOVE RAPIDLY EAST OF THE REGION ON THURSDAY OR THURSDAY NIGHT...WITH SOME LINGERING LIGHT SHOWERS POSSIBLE INTO FRIDAY MORNING.

If I could hit the Palomar repeater from my home in Dulzura, I'd volunteer in an instant, but unfortunately, it's too far away. I'll see If I can bring it up to at least listen to the net procedure and maybe join you if I ever get a big, high base antenna up in the future.

I made a 2 meter ground wave antenna last week and mounted it on the eve of my roof with a 2 foot plastic mast, but it didn't work any better than my whip antenna on my HT. Before that, I tried making the 300 ohm TV twinlead J-Pole that was published in QST a long time ago. That was even worse of a performer! I decided that it is not so much the antenna, but rather the fact that it has to be up very high in order to get out. I have a mast up on top of the hill, but I can only afford one 125 foot coax from the house to the antenna site. Maybe I can find a used duplexer on one of the swapmeet sites and give that a try. I'll just mount my 2m ground plane next to my HF antenna up on top of the hill.

Yep, that's the repeater I tuned in to, at 147.030. I listened from 7:00PM until 7:10PM. Wow, I sure must be far away if I can't even hear the repeater! Oh well, we can still keep in touch on the Yahoo group.

A Skywarn training class is being presented by Alex Tardy of the National Weather Service on Wednesday, May 16, 6:30PM, at the Carlsbad Safety Center. The address is 2560 Orion Way, Carlsbad, CA.

The presentation will include what Skywarn does to assist the National Weather Service during times of extreme weather, a discussion on extreme weather itself and how to recognize when something might be shaping up, fire weather, and of course a Q&A period. Also, Paul Nysen, KJ6KIA, will discuss the physics of lightning and how to minimize the chances of an antenna installation from being struck.

There is an online sign-up for this free Skywarn training class. Please direct anyone you know that may be intrested to: http://www.sdctp.com/NWS/Skywarn/SkywarnSignUp.html . In this way, we'll have an idea on how many people to expect.

Here's what I get from mapquest. It's the last 10 steps, which I copy-pasted. Comes out in some blocked elements in my browser, hope it isn't too goofed up in your browser...

It picks up from where you're driving East on Palomar airport Road away from I-5. After around 3.5 miles, you'll arrive at El Camino Real - big busy intersection (more below).

Jim

10. Turn left onto El Camino Real.
* El Camino Real is 0.5 miles past Yarrow Dr
* If you reach Innovation Way you've gone about 0.4 miles too far
  0.6 mi
11. Turn right onto Faraday Ave.
* Faraday Ave is 0.4 miles past Orion St
* If you reach Cougar Dr you've gone about 0.3 miles too far
  0.3 mi
12. Take the 2nd left onto Orion St.
* Orion St is 0.2 miles past Palmer Way
* If you reach El Fuerte St you've gone about 0.5 miles too far
  0.06 mi
13. Stay straight to go onto Orion Way.
  0.1 mi
14. 2560 ORION WAY is on the right.
* If you reach Orion St you've gone a little too far

This time I tried to listen using my scanner instead of my 2m HT, and with the same result - I couldn't hear anything! I wonder how far the ECRA repeater gets out? I know that I can hear the SANDRA Palomar repeater from my house, and I'm disappointed that I can't hear the ECRA repeater.

I'll be attending the class on May 16, but once again, it is on the "other side of the world" and quite a long drive for me. Perhaps Skywarn should consider opening a new branch in the other corner of the county, covering southeastern San Diego County? Everything currently happening seems to be "up north."

Tom,
speaking of the long drive for Skywarn training from Dulzura to Carlsbad, you might be interested to know we're looking for an East County venue for identical training with the same speakers. Do you or anyone else reading this know of such a venue, perhaps in conjunction with a local/nearby ham radio club or a local/nearby CERT? We're hoping to schedule something in May or June. Weekday evenings are preferred, but could settle for a Saturday morning or afternoon if that's all that's available.

It's great to hear that you haven't forgotten about your people on the other corner of the county. I'm curious, how many Skywarn spotters do you have in Jamul, Dulzura, Potrero, Tecate, Campo, and Boulevard?

I'm working on something that might work out for this. I'll get back to you.

While it doesn't help Tom much, you could
probably get Johnny with Julian CERT and/or Kurt
with Julian Amateur Radio Club to host and supply
a venue for this. They are a very active group
and Johnny has access to the local schools and
library. If you need contact info, contact me directly.

I've arranged for us to do this at the Dulzura Community Building. It is a nice hall for this sort of thing, and should also draw some local residents that are interested. This is where San Diego Rural CERT and other fire and disaster committees hold their meetings.

The local newsletter is going out to all local residents in the mail after tomorrow, so if you can get back to me early today with the date and time, I can even get an announcement inserted into the newsletter. I can copy the info from the email announcing the class in Carlsbad, or you can send me what you want to put in th local newsletter and I'll pass it on. Wednesday night is good. Get back to me ASAP.

I had a second question - does our local group have shirts, hats and jackets available, or do I have to buy these on the Internet?

Tom,
speaking of the long drive for Skywarn training from Dulzura to Carlsbad, you might be interested to know we're looking for an East County venue for identical training with the same speakers. Do you or anyone else reading this know of such a venue, perhaps in conjunction with a local/nearby ham radio club or a local/nearby CERT? We're hoping to schedule something in May or June. Weekday evenings are preferred, but could settle for a Saturday morning or afternoon if that's all that's available.

...RED FLAG WARNING IN EFFECT UNTIL 6 AM PDT THURSDAY FOR THE
COMBINATION OF GUSTY WINDS AND LOW RELATIVE HUMIDITIES FOR THE
SANTA BARBARA SOUTH COAST AND MOUNTAINS...

THE NATIONAL WEATHER SERVICE IN LOS ANGELES/OXNARD HAS ISSUED A
RED FLAG WARNING FOR GUSTY WINDS AND LOW RELATIVE HUMIDITIES.
THIS WARNING IS IN EFFECT UNTIL 6 AM PDT THURSDAY.

PLACE TO CREATE CRITICAL FIRE WEATHER CONDITIONS ACROSS THE
SANTA BARBARA SOUTH COAST AND MOUNTAINS FROM LATE THIS AFTERNOON
THROUGH THURSDAY MORNING. CONDITIONS WILL MODERATE SOME BETWEEN
LATE WEDNESDAY MORNING AND EARLY WEDNESDAY AFTERNOON...BUT GUSTY
NORTH WINDS WILL STRENGTHEN ONCE AGAIN AND HUMIDITIES WILL DIP
AGAIN BY WEDNESDAY EVENING...AND PERSIST INTO THURSDAY MORNING.

* WINDS...NORTH WINDS 25 TO 35 MPH WITH GUSTS TO BETWEEN 50 AND 60
MPH WILL DEVELOP THROUGH AND BELOW THE PASSES AND CANYONS OF THE
SANTA YNEZ RANGE THROUGH THURSDAY MORNING. WINDS GUSTS IN EXCESS
OF 60 MPH WILL LIKELY OCCUR EACH EVENING IN THE MONTECITO AREA.

WEDNESDAY...AROUND 35 PERCENT DURING THE LATE MORNING AND EARLY
AFTERNOON HOURS. ISOLATED SINGLE DIGIT HUMDITIES ARE POSSIBLE IN
MORE FAVORABLE FOOTHILL LOCATIONS THROUGH THURSDAY.

* IMPACTS...IF FIRE IGNITION OCCURS ACROSS THE WARNING AREA...THERE
COULD BE A RAPID SPREAD OF WILDFIRE THAT WOULD LEAD TO A THREAT
OF LIFE AND PROPERTY.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS
ARE EITHER OCCURRING NOW...OR WILL SHORTLY. A COMBINATION OF
STRONG WINDS...LOW RELATIVE HUMIDITY...AND WARM TEMPERATURES WILL
CREATE EXTREME FIRE BEHAVIOR.

PLEASE ADVISE THE APPROPRIATE OFFICIALS OR FIRE CREWS IN THE FIELD
OF THIS RED FLAG WARNING.

Due to the fact that we have an extra Tuesday in this month, we don't have a net control scheduled. However, I will handle duties if no one else is interested. Remember, any SKYWARN member can serve as net control! Just holler if you want to give it a try. I have a script available.

About a zillion years ago, Laura mentioned the possibility of running an informal pre-activation net when we might be anticipating an activation. I am totally on board with this! I don't know how I missed the original comment (below).

Laura, if there's some idea(s) you have in mind for putting this in place, then let's start talking...

I also missed the original copy of this message. I'm not sure if it was a private discussion or a public post, but I am in agrteement with any plans to hold a pre-activation net. It will couse no harm, and it will provide the possibility or a quicker and more organized activation, if necessary. In addition, as part of the messagfe said, we ne to, as a separate issue, find out who all is active, their location, and their capabilities.

...RED FLAG WARNING IN EFFECT FROM THIS AFTERNOON THROUGH THIS
EVENING FOR DRY LIGHTNING AND GUSTY OUTFLOW WINDS FOR THE
MOUNTAINS OF LOS ANGELES AND VENTURA COUNTIES AND ANTELOPE
VALLEY...

.MONSOONAL MOISTURE WILL BE ON THE INCREASE TODAY ACROSS SOUTHERN
CALIFORNIA. INITIALLY...MOST OF THE MOISTURE WILL BE AT THE MID
LEVELS OF THE ATMOSPHERE WITH FAIRY DRY AIR REMAINING AT LOW
LEVELS. AS A RESULT THUNDERSTORMS WILL MOSTLY PRODUCE DRY
LIGHTNING AND GUSTY OUTFLOW WINDS AND VERY LITTLE RAINFALL. THE
DRY LIGHTNING AND GUSTY OUTFLOW WINDS COMBINED WITH HOT
TEMPERATURES AND VERY DRY FUELS WILL INCREASE THE RISK OF FIRE
IGNITIONS AND RAPID FIRE GROWTH. STORMS ARE EXPECTED TO BECOME
WETTER LATER THIS EVENING INTO FRIDAY.

...RED FLAG WARNING IN EFFECT FROM NOON TODAY TO 9 PM PDT THIS
EVENING FOR DRY LIGHTNING AND GUSTY OUTFLOW WINDS FOR THE
MOUNTAINS OF LOS ANGELES AND VENTURA COUNTIES AS WELL AS THE
ANTELOPE VALLEY...

THE NATIONAL WEATHER SERVICE IN LOS ANGELES/OXNARD HAS ISSUED A
RED FLAG WARNING FOR DRY LIGHTNING AND GUSTY OUTFLOW WINDS...WHICH
IS IN EFFECT FROM NOON TODAY TO 9 PM PDT THIS EVENING. THE FIRE
WEATHER WATCH IS NO LONGER IN EFFECT.

* LIGHTNING...SCATTERED THUNDERSTORM ACTIVITY IS EXPECTED FROM
THIS AFTERNOON THROUGH THIS EVENING. THE STORMS ARE EXPECTED TO
PRODUCE LITTLE RAINFALL...RESULTING IN DRY LIGHTNING STRIKES.

* OUTFLOW WINDS...GUSTY AND ERRATIC WINDS TO 50 MPH ARE LIKELY IN
AND AROUND THUNDERSTORMS.

* OUTLOOK...MOISTURE WILL BEGIN TO INCREASE LATE THIS AFTERNOON AND EVENING...WITH PRIMARILY WET THUNDERSTORMS EXPECTED TONIGHT AND FRIDAY.

* IMPACTS...THREAT OF DRY LIGHTNING AND GUSTY OUTFLOW WINDS COMBINED WITH HOT TEMPERATURES AND VERY DRY FUELS WILL INCREASE THE POTENTIAL FOR FIRE IGNITIONS. ANY IGNITIONS THAT DO OCCUR COULD HAVE RAPID SPREAD THAT WOULD LEAD TO A THREAT TO LIFE AND PROPERTY.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS ARE EITHER OCCURRING NOW...OR WILL SHORTLY. A COMBINATION OF STRONG WINDS...LOW RELATIVE HUMIDITY...AND WARM TEMPERATURES WILL CREATE EXTREME FIRE BEHAVIOR. PLEASE ADVISE THE APPROPRIATE OFFICIALS OR FIRE CREWS IN THE FIELD OF THIS RED FLAG WARNING.

BULLETIN - EAS ACTIVATION REQUESTED
FLASH FLOOD WARNING
NATIONAL WEATHER SERVICE SAN DIEGO CA
243 PM PDT FRI JUL 13 2012

THE NATIONAL WEATHER SERVICE IN SAN DIEGO HAS ISSUED A

* FLASH FLOOD WARNING FOR...
SOUTH CENTRAL SAN BERNARDINO COUNTY IN SOUTHERN CALIFORNIA...

* UNTIL 445 PM PDT.

* AT 232 PM PDT...NATIONAL WEATHER SERVICE DOPPLER RADAR INDICATED
FLASH FLOODING FROM A STORM OVER THE WARNED AREA.

* LOCATIONS IN THE WARNING INCLUDE BUT ARE NOT LIMITED TO BIG BEAR
CITY AND THE DESERT SLOPES OF THE SAN BERNARDINO MOUNTAINS.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

DEBRIS FLOWS...INCLUDING MUD AND ROCK SLIDES...ARE EXPECTED WITH THIS
STORM. MUD SLIDES AND ROCK SLIDES CAN POTENTIALLY TRAP AND KILL
PEOPLE CAUGHT IN THEIR PATH.

EXCESSIVE RUNOFF FROM HEAVY RAINFALL WILL CAUSE FLOODING OF SMALL
CREEKS AND STREAMS...COUNTRY ROADS...AS WELL AS FARMLAND ALONG THE
BANKS OF CREEKS AND STREAMS.

DO NOT DRIVE YOUR VEHICLE INTO AREAS WHERE THE WATER COVERS THE
ROADWAY. THE WATER DEPTH MAY BE TOO GREAT TO ALLOW YOUR CAR TO CROSS
SAFELY. MOVE TO HIGHER GROUND.

IN HILLY TERRAIN THERE ARE HUNDREDS OF LOW WATER CROSSINGS WHICH ARE
POTENTIALLY DANGEROUS IN HEAVY RAIN. DO NOT ATTEMPT TO TRAVEL ACROSS
FLOODED ROADS. FIND ALTERNATE ROUTES. IT TAKES ONLY A FEW INCHES OF
SWIFTLY FLOWING WATER TO CARRY VEHICLES AWAY.

A FLASH FLOOD WARNING MEANS THAT FLOODING IS IMMINENT OR OCCURRING.
IF YOU ARE IN THE WARNING AREA MOVE TO HIGHER GROUND IMMEDIATELY.
RESIDENTS LIVING ALONG STREAMS AND CREEKS SHOULD TAKE IMMEDIATE
PRECAUTIONS TO PROTECT LIFE AND PROPERTY. DO NOT ATTEMPT TO CROSS
SWIFTLY FLOWING WATERS OR WATERS OF UNKNOWN DEPTH BY FOOT OR BY
```

AUTOMOBILE.

FYI, ECRA Palomar appears to be back up. But, I agree with using RACES Red. As long as we don't get hollered at like last time :)

I can take a shift this afternoon if we get activated.

The NWS says that Skywarn *may* be requested for San Diego County mountains and deserts today. If we get activated, we will use the ECRA Palomar repeater if available (147.030, +, PL103.5), with RACES RED 1 repeater as a backup (147.195, +, PL114.8).

I received a reply to the standby notice earlier, where the sender was wondering if there is an online audio source of the repeater activity, either ECRA or RACES. I'm not aware of anything, but does anyone else know of something like that?

If one is available, first place I would look is RadioReference.Com here

Hopefully this direct link to San Diego County will work:

Doesn't look like ECRA or RACES is available.

Subject: [SW_SKYWARN] Online VHF receiver resource?

I received a reply to the standby notice earlier, where the sender was wondering if there is an online audio source of the repeater activity, either ECRA or RACES. I'm not aware of anything, but does anyone else know of something like that?

BULLETIN - EAS ACTIVATION REQUESTED
FLASH FLOOD WARNING
NATIONAL WEATHER SERVICE SAN DIEGO CA
1225 PM PDT TUE AUG 7 2012

THE NATIONAL WEATHER SERVICE IN SAN DIEGO HAS ISSUED A

* FLASH FLOOD WARNING FOR...
SOUTH CENTRAL SAN DIEGO COUNTY IN SOUTHWEST CALIFORNIA...

* UNTIL 315 PM PDT.

* AT 1218 PM PDT...NATIONAL WEATHER SERVICE DOPPLER RADAR INDICATED
FLASH FLOODING FROM A STORM OVER THE WARNED AREA.

* LOCATIONS IN THE WARNING INCLUDE BUT ARE NOT LIMITED TO PINE
VALLEY...MORENA VILLAGE...CAMPO...DESCANSO AND LIVE OAK SPRINGS.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

EXCESSIVE RUNOFF FROM HEAVY RAINFALL WILL CAUSE FLOODING OF SMALL
CREEKS AND STREAMS...COUNTRY ROADS...AS WELL AS FARMLAND ALONG THE
BANKS OF CREEKS AND STREAMS.

DO NOT DRIVE YOUR VEHICLE INTO AREAS WHERE THE WATER COVERS THE
ROADWAY. THE WATER DEPTH MAY BE TOO GREAT TO ALLOW YOUR CAR TO CROSS
SAFELY. MOVE TO HIGHER GROUND.

FLOODING IS IMMINENT. IT IS IMPORTANT TO KNOW WHERE YOU ARE RELATIVE
TO STREAMS...RIVERS...OR CREEKS WHICH CAN BECOME KILLERS IN HEAVY
RAINS. CAMPERS AND HIKERS SHOULD AVOID STREAMS OR CREEKS.

IN HILLY TERRAIN THERE ARE HUNDREDS OF LOW WATER CROSSINGS WHICH ARE
POTENTIALLY DANGEROUS IN HEAVY RAIN. DO NOT ATTEMPT TO TRAVEL ACROSS
FLOODED ROADS. FIND ALTERNATE ROUTES. IT TAKES ONLY A FEW INCHES OF
SWIFTLY FLOWING WATER TO CARRY VEHICLES AWAY.

A FLASH FLOOD WARNING MEANS THAT FLOODING IS IMMINENT OR OCCURRING.
IF YOU ARE IN THE WARNING AREA MOVE TO HIGHER GROUND IMMEDIATELY.
RESIDENTS LIVING ALONG STREAMS AND CREEKS SHOULD TAKE IMMEDIATE
PRECAUTIONS TO PROTECT LIFE AND PROPERTY. DO NOT ATTEMPT TO CROSS
SWIFTLY FLOWING WATERS OR WATERS OF UNKNOWN DEPTH BY FOOT OR BY
```

AUTOMOBILE.

Was there no net again last night? It seemed that the repeater was down again. I switched to the RACES Red system and heard nothing there either. May I make a suggestion? The SANDRA Mt. Otay repeater is probably the most popular machine in the SD area. I often hear users as far away as Long Beach and La Crescenta. SANDRA seems to always be very gracious in allowing groups to use the repeater for weekly nets. Please check it out and see what you think. The frequencies are 146.640 out and 146.040 in with a tone of 107.2. This is the repeater that SANDRA ses for it's own nets, as well as many other groups that need reliable communications. And continue to keep the RACES red system as a backup/secondary choice.

Hi, Tom:

The repeater was down again, unfortunately. I like the idea of the Mt. Otay repeater, especially since it has a broader reach and might encourage more people to get involved in our nets and activations. We'll see what Jim thinks and go from there.

Thanks!

Laura,
  would having a meeting about this make sense? Over the air, Skype, in person, etc, whatever would work best. Invite the usual suspects, including Tom and John Bat, plus those on the San Diego Skywarn org chart...

BOTH LOCALIZED AND DISTANT HEAVY RAINFALL WILL CREATE RISES IN WASHES

MILES AND TAKE HOURS TO REACH YOUR LOCATION FROM UPSTREAM RAIN AREAS.
THIS COULD LEAD TO RISING WATER AND MINOR FLOODING WITHOUT RAIN
CURRENTLY FALLING AT YOUR LOCATION.

9543. San Diego County Skywarn activating 12 noon today for mountains and deserts

Yahoo group: SW_SKYWARN (2012 — 2016)
Date: 2012-08-21 17:55:45 UTC
From: wb6zpb
Topic: 9543 Message: 9543

The NWS is activating Skywarn today for the San Diego County mountains and deserts starting at 12 noon and continuing at least into the late evening. Concerns today are thunderstorms, hail, wind, flash floods, the usual monsoon stuff. These thunderstorms are expected to form over our mountains and then drift NNE into the desert areas during the afternoon, evening, and possibly into the night.

please report significant weather whether or not Skywarn is activated (see below).

Please use the ECRA Palomar repeater (147.030 + 103.5) for reporting significant weather conditions once Skywarn is activated, with RACES Red 1 (147.195 + 114.8) as backup should ECRA Palomar be off the air or if you simply cannot reach ECRA. If Skywarn is not yet activated, but you have something to report, ask if Skywarn net control folks are standing by. We can likely report your weather for you.

Also feel free to use the usual web based tool (http://www.swskywarn.org/ReportWeather.php) or call the NWS Spotter phone number to report significant weather in the absence of Skywarn Net Control.

MOST FLOOD DEATHS OCCUR IN AUTOMOBILES. NEVER DRIVE YOUR VEHICLE INTO
AREAS WHERE THE WATER COVERS THE ROADWAY. FLOOD WATERS ARE USUALLY
DEEPER THAN THEY APPEAR. JUST ONE FOOT OF FLOWING WATER IS POWERFUL
ENOUGH TO SWEEP VEHICLES OFF THE ROAD. WHEN ENCOUNTERING FLOODED
ROADS MAKE THE SMART CHOICE...TURN AROUND...DONT DROWN.

I tried to check in several times last night but was unable to hit the repeater. I heard at least one other person, maybe two, that was also unable to make it into the Palomar repeater. There was some recent talk about changing the weekly net to the SANDRA Mt. Otay repeater. Has anything furher been discussed on this?

Also, I understand that there is an HF rig at the NWS office. Is it fully functional? How would it be utilized? Would an occasional HF net (perhaps 75 meters) be something that anyone would like to try? If nothing else, it would be the kick in the pants some of you might need to upgrade to general class (or hiher) and start enjoying some of the fun of DX!

Hi, Tom:

We certainly can entertain switching to another repeater if it allows more coverage of the county. I'd like to hear more from you and others regarding coverage of the SANDRA Mt. Otay machine (or others) that you think might work.

There is an HF rig at NWS and I know there's a multiband antenna on the roof. Last I knew it was functional. My understanding is that it serves mainly the SHARES federal program and we also use it during SKYWARN Recognition Day each year. Along the same lines, I am HF-capable and would be willing to try an HF net, perhaps monthly, if there is interest. In fact, it would be fun to see if we could get other SKYWARN members from other parts of the county to join us, as well. I'm a fan of 40 meters for shorter distance work, but other bands are possibilities, too.

What does everyone think? Comments and suggestions welcome! (And thanks Tom, for getting this discussion rolling)

Laura - You are on the right track. I hope you will continue to work on the thought of changing to the Mt. Otay repeater and also a monthly HF net. The Mt.Otay repeaters (2m/220/440) have such good coverage that this is the machine that SANDRA itself has chosen for it's weekly net, as well as several other local clubs and organizations. Listen to the SANDRA net at 8PM any Sunday and you will get an idea of what the coverage area is as you lsten to the people checking in from all over.

Also, see if the HF rig at NWS could be used as a secondary net control frequency during times of activation or other emergencies. Myself, for example, could not check into the net from anywhere in the SE area of the county, from Otay Lakes Road to Boulevard and Jacumba, but I could reach you from my base station on HF, or on a mobile/handheld using the Mt.Otay frequency. If a seere storm would disable the phonne lines and nternet service, I would be useless, whereas I do have a battery backup for my HF rig, and the Mt. Otay repeater has a battery backup also, so I coule use my HT from wherever I was.

Perhaps find out how many others share my concerns. If I am the only one with problems reaching the Palomar repeater, then I'll shut up and won't bother you any more, but I'm almost certain that there are others that have the same problem. I was talking to a guy from Campo the other day that said he does not participate with Skywarn because he cannot use the Palomar repeater, and some others on the frequency at the time agreed, so this is what originally promped me to contact you about this.

Hi, Tom:

We certainly can entertain switching to another repeater if it allows more coverage of the county. I'd like to hear more from you and others regarding coverage of the SANDRA Mt. Otay machine (or others) that you think might work.

There is an HF rig at NWS and I know there's a multiband antenna on the roof. Last I knew it was functional. My understanding is that it serves mainly the SHARES federal program and we also use it during SKYWARN Recognition Day each year. Along the same lines, I am HF-capable and would be willing to try an HF net, perhaps monthly, if there is interest. In fact, it would be fun to see if we could get other SKYWARN members from other parts of the county to join us, as well. I'm a fan of 40 meters for shorter distance work, but other bands are possibilities, too.

What does everyone think? Comments and suggestions welcome! (And thanks Tom, for getting this discussion rolling)

Also, I understand that there is an HF rig at the NWS office. Is it fully functional? How would it be utilized? Would an occasional HF net (perhaps 75 meters) be something that anyone would like to try? Laura & Tom -

Since there is no one repeater with perfect county-wide coverage, why not use multiple repeaters? Either use a different repeater each week, rotating through several we use operationally and/or with the best coverage, or have subnets on multiple repeaters with the main net on the ECRA machine. The latter would be more of an effort to coordinate - each subnet would require a NCS that would be able to talk to both its subnet repeater & the ECRA machine. Both methods would allow more folks to check in.

Re: HF. Good idea! As Laura noted we can do that now on some net days, as some of us NCSs have HF capabilities. I'm scheduled as the NCS on the third Tuesday in Central, so maybe next month we can use one of the HF frequencies in the Comm Plan and try it out.

Putting on my Communications Coordinator hat, from a operational standpoint the following might be useful:

- all Areas utilize all their primary & secondary tac channels for weekly nets, if available. Area NCSs would be able to track limitations to and changes in repeater coverage.

- use the NWS station more often to run the net. The WFO has a good central location in SD county - I'm in the process of modeling it using Radio Mobile to see how good it is. Personally would be willing to run the net from the NWS once a month or so to keep it active & test coverage.

- eventually set up a regional HF net and practice establishing comms between the NWS station and the other Areas.

Jerry aka AK6QJ aka SDG152

ADDITIONAL RUNOFF FROM THIS STORM MAY IMPACT PORTIONS OF HIGHWAY
395 NORTH OF HIGHWAY 18 AS WATER DRAINS TOWARDS THE MOJAVE RIVER.

* LOCATIONS IMPACTED INCLUDE...ADELANTO...HELENDALE AND ORO GRANDE.

THE NATIONAL WEATHER SERVICE IN SAN DIEGO HAS ISSUED AN

* URBAN AND SMALL STREAM FLOOD ADVISORY FOR MINOR FLOODING IN
SOUTHERN COACHELLA VALLEY...

* UNTIL 600 PM PDT

* AT 357 PM PDT RADAR SHOWED VERY HEAVY RAIN MOVING FROM SANTA ROSA
MOUNTAIN EASTWARD TOWARD THE SOUTHERN VALLEY. HEAVY RAIN AS WELL
AS RUNOFF DOWN THE MOUNTAIN SLOPES WILL RESULT IN BRIEF FLOODING OF
THE MAINLY AGRICULTURAL GROWING AREAS WEST OF MECCA AND OASIS. THE
SMALL COMMUNITIES OF ONE HUNDRED PALMS AND VALERIE MAY BE IMPACTED
WITH FLOODING...AS WELL AS HIGHWAY 86 AND 66TH AVENUE.

MUD AND DEBRIS FLOWS ARE ALSO POSSIBLE IN THE NORMALLY DRY WASHES
DOWN THE EASTERN SLOPES OF THE SAN JACINTO MOUNTAINS.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

MOST FLOOD DEATHS OCCUR IN AUTOMOBILES. NEVER DRIVE YOUR VEHICLE INTO
AREAS WHERE THE WATER COVERS THE ROADWAY. FLOOD WATERS ARE USUALLY
DEEPER THAN THEY APPEAR. JUST ONE FOOT OF FLOWING WATER IS POWERFUL
ENOUGH TO SWEEP VEHICLES OFF THE ROAD. WHEN ENCOUNTERING FLOODED
ROADS MAKE THE SMART CHOICE...TURN AROUND...DONT DROWN.

CONTINUING TO MOVE EASTWARD INTO THE SOUTHERN COACHELLA VALLEY.

THE NORMALLY DRY WASHES OF MARTINEZ CANYON AND SHEEP CANYON ARE
LIKELY FILLING WITH WATER AND FLOWING INTO THE SOUTHERN VALLEY. THE
HEAVY RAIN WAS FALLING WEST OF VALERIE...100 PALMS...AND HIGHWAY 86

9671. SANDRA repeater

Yahoo group: SW_SKYWARN (2012 — 2016)
Date: 2012-09-08 15:48:15 UTC
From: Laura Quarantiello
Topic: 9349 Message: 9671

A request has been sent to SANDRA regarding use of the Otay repeater for weekly and activation nets. We have been using ECRA Palomar, but many of our members - especially those in the back country, have indicated that they have trouble reaching the ECRA repeater. Should our use of the SANDRA repeater be approved, we can discuss possible changes to our comm plan to move toward using SANDRA as our primary and RACES Red 1 as our backup.

I'd appreciate your input on this!

Thanks,
Laura KI6AOK

The Mt OTAY repeater would leave us out in Shelter Valley. We can not
hit that machine. We can hit Mt Laguna easily with Ht's.

Are you able to hit RACES Red 1? Net control commonly monitors this
freq, as well as primary, so you wouldn't be out in the cold if we
switch to Otay.

I think this is a good move. It doesn't hurt to explore all options. If there are any major problems, you can always go back to a previos plan or explore more new options until the right combination is found. I'm still anxious to try a HF net with the possibility of activation checkins on HF. But that can come later once the 2 meter issue is worked out.

A request has been sent to SANDRA regarding use of the Otay repeater for weekly and activation nets. We have been using ECRA Palomar, but many of our members - especially those in the back country, have indicated that they have trouble reaching the ECRA repeater. Should our use of the SANDRA repeater be approved, we can discuss possible changes to our comm plan to move toward using SANDRA as our primary and RACES Red 1 as our backup.

I'd appreciate your input on this!

The repeater was down again, unfortunately. I like the idea of the Mt. Otay repeater, especially since it has a broader reach and might encourage more people to get involved in our nets and activations. We'll see what Jim thinks and go from there.

I do know that the PARC repeaters are in a different site than the ECRA. I am just know sure how well the Otay repeater can be heard up here.

Eric,

I'm not an expert on coverage of the different repeaters, but from what I understand, the SANDRA Mt. Otay repeater was suggested as having better coverage than those located on Palomar Mountain. I understand that there is no one repeater that is going to be perfect for us, but we're trying to find one that will serve the greatest amount of spotters. As I said, all input on this issue is welcome! I'm hoping Jim (ZPB) will chime in here, as well, with his thoughts.

Thanks!

9677. RE: [SW_SKYWARN] SANDRA repeater

To the east, it gets out past Jacumba and north into the Ramona area, but it is spotty north of Escondido. I was able to hit the repeater from Rincon and from highway 15 near Escondido on my 5 watt HT, but there are some spots around Fallbrook and Rainbow where it was too scratchy. A mobile or base should probably be able to hit it from just about anywhere in the county, but I can't say for sure because I don't have a mobile or 2m base. I'm just going by some of the locations I hear checking in to the Sunday night SANDRA net on the Otay repeater.

What kind of coverage does Otay have along the moutain range roads, which is where most of our monsoon activity seems to take place?

What do you think Jim??

I do know that the PARC repeaters are in a different site than the ECRA. I am just know sure how well the Otay repeater can be heard up here.

Eric,

I'm not an expert on coverage of the different repeaters, but from what I understand, the SANDRA Mt. Otay repeater was suggested as having better coverage than those located on

Palomar Mountain. I understand that there is no one repeater that is going to be perfect for us, but we're trying to find one that will serve the greatest amount of spotters. As I said, all input on this issue is welcome! I'm hoping Jim (ZPB) will chime in here, as well, with his thoughts.

Thanks!

A request has been sent to SANDRA regarding use of the Otay repeater for weekly and activation nets. We have been using ECRA Palomar, but many of our members - especially those in the back country, have indicated that they have trouble reaching the ECRA repeater. Should our use of the SANDRA repeater be approved, we can discuss possible changes to our comm plan to move toward using SANDRA as our primary and RACES Red 1 as our backup.

I'd appreciate your input on this!

INCREASE EACH AFTERNOON DUE TO SURFACE HEATING AND AMPLE
MOISTURE...AND A FEW MAY DRIFT OVER THE COAST AND VALLEYS.

RAINFALL IS NOT EXPECTED TO BE HEAVY WEST OF THE MOUNTAIN
FOOTHILLS...BUT ANY THUNDERSTORMS WOULD CONTAIN DANGEROUS LIGHTNING
AND MAY PRODUCE BRIEF HEAVY DOWNPOURS AND STRONG WIND GUSTS.

BASED ON CURRENT MODEL GUIDANCE...THE MAIN THREAT FOR EXCESSIVE
RAINFALL AND FLOODING APPEARS TO BE LATE MONDAY THROUGH MONDAY NIGHT
OVER THE SAN DIEGO AND RIVERSIDE COUNTY MOUNTAINS AND DESERTS.

PRECIPITATION CHANCES LOWER BY TUESDAY MORNING AS THE DISTURBANCE
STARTS TO MOVE OFF TO THE EAST...BUT SOME SHOWERS COULD REMAIN IN
THE MOUNTAINS THROUGH TUESDAY AFTERNOON.

AT 406 AM PDT...DOPPLER RADAR CONTINUES TO SHOW A NEAR STATIONARY THUNDERSTORM NEAR MECCA....BUT RAINFALL RATES HAVE DIMINISHED.

SINCE MIDNIGHT RAINFALL AMOUNTS OF 2.44 INCHES HAVE BEEN MEASURED AT KENT SEA FARMS. THE CALIFORNIA HIGHWAY PATROL OBSERVED THAT AVENUE 66 WAS FLOODED EAST OF JOHNSON AVENUE.

IT IS LIKELY THAT MOST OF THE LOW LYING AREAS EAST OF HIGHWAY 86 AND SOUTH OF HIGHWAY 111...BETWEEN MECCA AND NORTH SHORE...ARE ALSO FLOODED..AND WILL CONTINUE SO THROUGH 545 AM.

EXPECT ANOTHER QUARTER TO A HALF INCH OF RAIN BEFORE 5 AM WHEN THE THUNDERSTORMS SHOULD END.
